Handbook of Personality Theory and Research

One of the major neuropsychological models of personality, developed by world-renowned psychologist Professor Jeffrey Gray, is based upon individual differences in reactions to punishing and rewarding stimuli. This biological theory of personality - now widely known as 'Reinforcement Sensitivity Theory' (RST) - has had a major influence on motivation, emotion and psychopathology research. In 2000, RST was substantially revised by Jeffrey Gray, together with Neil McNaughton, and this revised theory proposed three principal motivation/emotion systems: the 'Fight-Flight-Freeze System' (FFFS), the 'Behavioural Approach System' (BAS) and the 'Behavioural Inhibition System' (BIS). This is the first book to summarise the Reinforcement Sensitivity Theory of personality and bring together leading researchers in the field. It summarizes all of the pre-2000 RST research findings, explains and elaborates the implications of the 2000 theory for personality psychology and lays out the future research agenda for RST.

Handbook of Personality Theory and Research

Now in a new edition, this book expands on previous editions on the study of personality and neuroscience. It draws on research on the biological foundations of personality and trait-based research including investigations of neural mechanisms in
defensive information processing as well as brain systems critical to self-concept. The text introduces questions of personality-and-brain along with biological foundations. It explores each of various theoretical issues at a new level of investigation, that of brain research to provide a more up-to-date look at the field.

Religion in Personality Theory makes clear the link between theory and research and personality and religion. Presently, most personality texts have a limited discussion of religion and reference few theorists other than Freud and Maslow in relation to the subject. This book reviews the theory and the empirical literature on the writings of 14 theorists. Every chapter concludes with a summation of the current research on the theorist’s proposals. Reviews: “Frederick Walborn has written an excellent text that explores the degree to which classical personality theorists were personally influenced by and focused upon religion in developing their personality theories. Each theorist is presented in sufficient detail so that their personal views of religion are seen to influence the theories they developed. In addition, the current status of the empirical evidence in the psychology of religion is explored in the context of the theorist and theory to which the data is most relevant. Current and up to date, this text is appropriate for either a course in Personality or as an introduction to the Psychology of Religion. The author’s own comprehensive theory of religion and spirituality creatively integrates the positive contributions of the classical personality theorist to the contemporary psychology of religion.” -Ralph W. Hood Jr., Professor of Psychology, University of Tennessee at Chattanooga

“In this interesting and accessible book, Frederick Walborn thoughtfully probes the place of religion and spirituality in the writings of a broad range of classical psychological thinkers and offers an insightful critique of current empirical research on the complex relation of religion and spirituality to individual well-being.” -Michele Dillon, Ph.D., Professor and Chair, Department of Sociology, University of New Hampshire, Durham, New Hampshire

Identifies what major personality theorists say about religion
Investigates whether evidence supports or refutes predictions made by different theories
Concludes with a comprehensive integrative theory on religion and spirituality

Handbook of Personality at Work

Widely adopted, this uniquely comprehensive text introduces the techniques and concepts of statistics in human and physical geography. Unlike other texts that gloss over the conceptual foundations and focus solely on method, the book explains not only how to apply quantitative tools but also why and how they work. Students gain important skills for utilizing both conventional and spatial statistics in their own research, as well as for critically evaluating the work of others. Most chapters are self-contained in order to provide maximum flexibility in course design. Requiring no math beyond algebra, the book is well suited for undergraduate and beginning graduate-level courses. Helpful features include chapter summaries, suggestions for further reading, and practice problems at the end of each chapter.

Handbook of Personality and Self-Regulation

Handbook of Personality, Fourth Edition

Designed as a text for both graduate and undergraduate students, this book, originally published in 1995, presents an intrapsychic explanation of human behaviour – concepts based on psychological processes and ‘structures’ within the mind. In
this context, a unique treatment of personality theory is introduced. It focuses on Freud, Kelly and Angyal: Freud’s psychoanalytic theory of personality based on desires, Kelly’s personal construct theory for thinking, and Angyal’s holistic concepts of personality. Each theory is given a detailed analysis in separate chapters. Freud’s psychoanalytic theory is cast as a theory of motivation, Kelly’s personal construct theory as a theory of cognition, and then it is noted that there is no comprehensive theory of personality based on emotion. Although Angyal’s holistic theory is rarely described in modern textbooks, Lester includes this because none of the other holistic theorists rival Angyal in their range of hypothetical constructs or descriptive terms. Then, in sections dealing with alternative viewpoints, the author shows how other personality theorists actually endorse and expand upon the ideas expressed by the aforementioned three, albeit with different terminology. Recognizing the diversity of holistic views in theories of personality, several counterpoint chapters are devoted to the holistic ideas. Lester separates these into three major areas: theorists who have focused on the split in the mind between the real and ideal self; recent theorists who explore the possibility that the mind is a ‘multiplicity of selves’; and theorists who, though not having their viewpoints sufficiently articulated in the literature, are still well established in the history of psychology. Other features include a presentation of the material in modern viewpoints, instead of the precise and perhaps outdated style as written by the individual theorists, and boxed highlights in each section, providing students with practical capsule information for easy reading.

**APA Handbook of Personality and Social Psychology**

This handbook is the first volume to provide a comprehensive look at personality development. It features a state-of-the-art examination of the field, an area that is enjoying a resurgence in popularity. Five major types of advances, all of which are represented in this volume, are the result of the recent burst in research activity in this area: 1) new theoretical perspectives, 2) higher-quality empirical studies, 3) more sophisticated research designs and analyses, 4) attention to development across the lifespan, and 5) the growing prominence of interdisciplinary approaches to personality development. The Handbook of Personality Development is comprehensive across the lifespan, in its range of personality constructs, and in its coverage of theoretical and methodological frameworks. It is the first volume to address the most important personality development theoretical frameworks in one location—the evolutionary, physiological, behavioral genetic, and socio-cultural perspectives. The book also reviews new statistical techniques that allow for the estimation of individual differences in stability and the analysis of change. The latter part of the book focuses on personality development over the lifespan, from infancy to older adulthood. The authors address personality variables such as emotion regulation, temperament, and self-concept across the lifespan. The
book concludes with a compelling capstone chapter by Dan McAdams on how personality develops. The Oxford Handbook of the Five Factor Model

Each day, we make judgments about the personality characteristics of those around us, and we routinely rely on them to guide our behavior in interpersonal interactions and relationships. This handbook provides a review of theory and research on the accuracy of personality judgments. After a historical review, the first section presents the major theoretical models that guide
research in this area and describes methodological approaches to evaluating accuracy. The second section reviews the research findings relevant to four moderators of accuracy, and the third section focuses on judgments people make of themselves. The fourth section examines various types of information used in making personality judgments, while the fifth section provides examples of some of the domains to which accuracy research can be applied, including romantic relationships and clinical practice. Learning about the process of accurate judgments can be used to help people understand when and how they are more likely to make accurate judgments, and this handbook offers a thorough, evidence-based, and up-to-date review of this research field.
